

THE INTENSIVE SLIMMING SHOCK TREATMENT

For the first time in Romania, **Day Spa** proudly presents the COLD BODY WRAPPINGS THERAPY. It is performed with high quality products from the Bruno Vassari line - the results of the latest in body aesthetics. The "strips treatment", as we call it, or THE INTENSIVE SLIMMING SHOCK TREATMENT, is recommended to be used either included in intensive slimming treatments, as a catalyst, or as a treatment in its own.

ITS RESULTS: YOU CAN LOSE UP TO 4-5 CM IN WAIST CIRCUMFERENCE AND UP TO 3-4 CM IN HIPS CIRCUMFERENCE!

[We haven't talked about miracles before, but this procedure, tried by us and tested in front of our clients, is truly spectacular.](#)

THE PROCEDURE

First the client is carefully measured and the measurements are written down on the chart in order to compare them with the measurements taken after the procedure is completed. These extraordinary products from the Bruno Vassari line are finally in Romania and we are able to offer them to our clients!

First step: a peeling product is applied. The peeling product IL SALE E L'UVA from the Bruno Vassari's Kianty Spa line is based on a revolutionary technique in professional beauty care: wine-therapy. As it is powdery, it is mixed with massage oil in order to be applied. This is of great importance, as the professionals can mix exactly the right amount and prepare it for the exact needs of every client individually: it can be rougher or softer, depending on the skin condition of each person.

After the peeling products are removed from the skin with a soft wet glove, the thermo-active cream from Bruno Vassari's Body Energy line is applied. This cream will stimulate blood circulation and increase body temperature. Then the shaping liquid EDERALIS is mixed with water and the resulting substance is used to soak the elastic strips. These strips are wrapped around the area to be treated and left to activate for 30 minutes. In this stage the body temperature decreases and an irrigation of the deep tissue is produced. The client might feel cold. The spectacular results of this procedure are based on this double action, on the hot-cold alternation. Also, EDERALIS has a profound fat reducing effect: it simply melts body fat, turning it into liquid which is then naturally eliminated. That is why the results are stabile and lasting.

After the required period has passed, the elastic strips are removed and an intensive firming gel is applied, without massage.

Duration: 45-55 minutes

ITS ACTION

The toxins accumulated between the fat cells due to a defective blood circulation and other factors (diet, smoking, pollution, sedentary activity) cause the interstitial space to enlarge, producing what we call the "orange peel" aspect, namely cellulite. The intensive slimming shock treatment the toxins are eliminated. The hot-cold alternation causes blood-vessel constriction and dilatation, thus the interstitial space is liberated and a good blood circulation is restored. The active ingredients contained in the products used for this procedure greatly contribute as well to the profound anti-cellulite effect. The body is simple reshaped. The skin is elastic and firm, as after a lifting procedure, the body looks smooth and a significant inch loss occurs. Even the next day, as the melted fat is naturally eliminated, one may lose a cm or two. After the procedure, no other is to be performed. Showers are prohibited for at least 5 - 7 hours. It is highly recommended to enhance the beneficial effects by applying a capsule of Serum Lift Extreme from the Body Energy line, every night, for at least 21 days.

If during the recommended 10 sessions of treatment the detoxifying process is supported in other ways: diuretic teas, a healthy diet, exercise etc, the effects are much more drastic and stabile.

Because the circumference is considerably reduced, it is highly advisable that at least two sessions of a firming treatment are performed (either electro stimulation or anti-cellulite massage).
